

Important information about Microlog GX modules and Microsoft Windows Vista!

Important: Microlog GX modules (Bump, Recorder, Run up Coast down, FRF) install correctly with Microsoft Windows Vista operating systems only if Microsoft Mobile Device Center version 6.1 is installed on the Windows Vista PC PRIOR to installing the modules.

- Microsoft Mobile Device Center version 6.1 for Windows Vista is not an application that is shipped with Windows Vista. MS Mobile Device Center 6.1 may be downloaded for free from Microsoft's website at this link: <http://www.microsoft.com/windowsmobile/devicecenter.mspx>.
- This new version of the MS Mobile Device Center contains key improvements and new features to help customers synchronize information between their Microlog and a Windows Vista PC.
- The MS Mobile Device Center 6.1 is only supported on Windows Vista PCs.
- If MS Mobile Device Center version 6.1 is not installed **PRIOR** to installing the Microlog Module(s), the Module Installer(s) will still be installed on the PC, however, there will NOT be SKF Installer application(s) available under the Start/Programs menu.
