## SKF adds new Lincoln PowerLuber to grease gun line

Gothenburg, 4, March 2014: SKF today announced the introduction of the Lincoln PowerLuber series 1880 grease gun for multiple lubrication applications. Featuring a redesigned, high-torque powerhead, the two-speed motor delivers grease at up to 10,000 psi (690 bar) in both high- and low-output settings.

Powered by an efficient, 20-volt, lithium-ion battery, the PowerLuber utilizes a multifunction liquid crystal display (LCD) to accurately indicate standard readings such as battery level and grease flow (ounces or grams). In addition, the LCD's flow meter detects the loss of prime, eliminating false readings to help ensure that the equipment being serviced is properly lubricated.

The rugged grease gun's new three-point base keeps the tool upright and stable for easy handling without being bulky. This feature allows access to tight areas and reduces operator fatigue when lubricating simple-to-reach fittings. Also, the tool has a convenient built-in light emitting diode (LED) to illuminate the work area.
