

How to move a test result that has been saved to the wrong Motor ID.

For example: If Motor ID: Motor1 has test result 1/2/03 that really belongs to Motor ID: Motor2 in "XYZ Database.mdb" Here are the steps to move the test result 1/2/03 to Motor2 from Motor1.

Using the AWA 4.x.x software

- 1) Create a new database called "Temp.mdb"
- 2) Open database "XYZ Database.mdb"
- 3) Click on the Data Transfer (Database – Data Transfer menu item)
  - Source - XYZ Database.mdb
  - Destination – Temp.mdb
- 4) Transfer only the Motor ID: Motor1 to the Temp database.
- 5) Close Data Transfer
- 6) Open the Temp.mdb
- 7) Select Motor ID: Motor1
- 8) Click on the Application Tab
- 9) Delete all Test Results except for the test result that you want to move. For example leave test result 1/2/03 and delete all others.
- 10) Click on the Nameplate Tab, and change the Motor ID from Motor1 (the wrong Motor ID) to Motor2 (the correct Motor ID). Update the record.
- 11) Click on the Data Transfer (Database – Data Transfer menu item)
  - Source - Temp.mdb
  - Destination – XYZ Database.mdb
- 12) Transfer the Motor ID: Motor2 in the Temp.mdb database to the Motor2 of the XYZ Database.mdb. The Data Transfer will update the existing Motor2 with the new record.
- 13) Close the Data Transfer
- 14) Open the XYZ Database.mdb
- 15) Select Motor ID: Motor1
- 16) Click on the Application Tab and select the test result that does not belong to this Motor ID, example 1/2/03 and delete the test result from Motor1, since it now exists on Motor2 where it belongs.
