

SmartStart™

WICM231

MARLIN® and SKF Machine Analyst Inspector

Course objective

To introduce the MARLIN System data collection features and fault detection capabilities to the new user and SKF Machine Analyst Inspector database management, data display, and data reporting features.

2009 tuition

\$6,995

3 days

Course description

Course topics are organized according to the steps necessary to operate the product.

- Setup and utilize the MARLIN Condition Detector (MCD) as a stand-alone probe to monitor overall machinery and bearing vibration and temperature.
- Installation and use of MARLIN Quick Connect studs
- Set up and utilize the MARLIN data manager to monitor and record machinery condition and plant process data.
- Use the MARLIN data manager to review data in the field
- Build a MARLIN measurement database using SKF Machine Analyst Inspector software

- Transfer data between SKF Machine Analyst Inspector and the MARLIN data manager
- Display and generate trends and reports SKF continues to add new MARLIN hardware and software platforms. The SmartStart program will be tailored to match customer specific systems and requirements

WICM232

MARLIN and SKF @ptitude Analyst Inspector

Course objective

To introduce the MARLIN System data collection features and fault detection capabilities to the new user and SKF @ptitude Analyst Inspector database management, data display, and data reporting features.
