SKF Multilube pumping unit
for industrial lubrication systems
SKF Multilube pumping unit

SKF centralised lubrication systems are an effective solution for lubricating individual machines and equipment. The systems are easy to install, the pumping unit has a compact structure, the metering devices operate reliably and the system is simple to use. As a result, machine applications that use this system are much more reliable even in harsh outdoors operating conditions.

Compact and flexible solution

All relevant components and functions are integrated into the modular SKF Multilube pumping unit: control unit, pump, reservoir, directional valve and pressure monitoring. Built-in heating enables operation even under demanding and cold conditions.

SKF Multilube can be used with all SKF grease and oil systems, SKF MonoFlex single-line, SKF DuoFlex dual-line, SKF ProFlex progressive lubrication systems. Auxiliary equipment, such as sliding surface nozzles and lubrication brushes, can be used depending on lubrication needs.

Advantages and features

- Compact “all-in-one” structure
- Modular and durable design
- Easy installation and start-up
- Two reservoir sizes
- Two-ball pumping element improves operational reliability
- Suitable for both grease and oil systems
- Suitable for various metering device types
- Filling connection equipped with filter
- Reservoir with overfill relief valve
- External pressure relief valve
- Visual level indicator in reservoir
- Electrical low level switch in reservoir
- Heating resistor in pumping block
- Wide operating temperature range
- Clear and versatile user interface
- Optional internal or external control
- Several operation voltages

274 mm

720 mm
539 mm
User interface IF-103

Molded in epoxy resin: water resistant and shockproof. Buttons are based on EMFI technology, no moving parts.

**Display, 3 digits**
- State of lubrication
  - Time display
  - Alarm codes
- Set values of lubrication parameters
- Display of main line pressures

**Indicator lights, 3 two color LEDs**
- Status of main line and pump
- Alarm type

**Buttons, 3 pcs**
- Triggering operations
  - Extra lubrication
  - Acknowledgment of alarms
- Displaying and setting parameters
- Toggling between time and pressure displays

**Lubrication parameters**
- Lubrication cycle, 1min ... 999h
- Max. pressurizing time 1 ... 999s
- Pressure limits 0 ... 200bar
- Type of lubrication system
- Parameter settings are password protected

The integrated user interface

The SKF Multilube pumping unit is controlled by a built-in user interface, which makes it simple to use the system and adjust its functions.

It is also possible to control the system externally with SKF multi-channel control centres, or a customer’s PLC or process control system. Remote monitoring and control can also be achieved using text messages by creating a connection between an optional modem which is installed on the pumping unit and a mobile phone.

Designation system for SKF Multilube pumping unit

Example: MLPI-10-2-230-IF103-PSE

**Product identification**
- MLPI: SKF Multilube pumping unit for industrial use

**Reservoir size**
- 4 litres
- 10 litres

**System type**
- 1: Single-line MonoFlex system
- 2: Dual-line DuoFlex system
- P: ProFlex system
- C2P: Two channel/zone ProFlex system
- OS: Single-line MonoFlex Oil system

**Operating voltage**
- 24 V DC
- 115 V AC
- 230 V AC

**User interface**
- IF103: Built-in user interface and control
- 24: External control, control voltage 24 V DC

**Pressure control**
- PSE: Built-in pressure sensor
- EPT: External pressure transmitters

For all systems described in this brochure, see important product usage information on the back cover.
Centralised lubrication improves runnability

The high SKF standards for automatic lubrication systems virtually prevent bearing failures and improve the runnability of machines and equipment. The SKF Multilube pumping unit provides optimal lubrication results and reduces energy and lubricant consumption at the same time. The SKF centralised lubrication system is also a financially justified solution for lubrication to improve the runnability of production processes.

SKF DuoFlex lubrication systems with SGA metering devices

Lubricant greases NLGI 000 – 2
SGA dosage range 0,15 – 8,6 g

Designed for use in dual-line lubrication systems, SGA metering devices feature a modular design with separate baseplates which make system modifications simple. SGA metering devices are manufactured of zinc coated carbon steel or stainless steel and are installed in either aluminium or stainless steel BPSG baseplates. There are three sizes of metering devices and six baseplates, covering all industrial needs from small joints to large roller bearings.

SKF MonoFlex lubrication system with LG and B-type metering devices

LG type metering devices

LG type metering devices are used in SKF MonoFlex single line lubrication applications. The metering device group consists of a mounting rail with one or more metering devices attached to it. Metering devices and mounting rails are made of stainless steel.

B type metering devices

B type metering devices are used in SKF MonoFlex single-line lubrication systems. The metering device group consists of a mounting rail with one or more metering devices attached to it. Metering devices and mounting rails are made of zinc coated carbon steel.

For additional information on B and LG type metering devices, please refer to SKF brochure PUB 11276, B-, LG- and OS-metreing devices for SKF MonoFlex single-line lubrication systems.

LG and B metering devices

LG and B metering devices are used in SKF MonoFlex single line lubrication applications. The metering device group consists of a mounting rail with one or more metering devices attached to it. Metering devices and mounting rails are made of stainless steel.
VPB and VPK metering devices

OS metering devices

Progressive metering device

Lubricant greases NLGI 000 – NLGI 2

VPB dosage per cycle 0.2 cm³

VPK dosage per cycle and outlet 0.05 – 0.6 cm³

OS-33 metering devices

Lubricant oil

OS dosage range 0.3 – 2.6 cm³

The VPB/VPK progressive metering devices used in SKF ProFlex systems can also be used in centralised manual lubrication systems. Metering devices are manufactured of zinc coated carbon steel. There is also available two channel/zone ProFlex system. For additional information regarding progressive metering devices, please refer to SKF brochure PUB 1-3017, Block feeder VPB, Block feeder for use in oil or grease lubrication systems.
The Power of Knowledge Engineering
Combining products, people, and application-specific knowledge, SKF delivers innovative solutions to equipment manufacturers and production facilities in every major industry worldwide. Having expertise in multiple competence areas supports SKF Life Cycle Management, a proven approach to improving equipment reliability, optimizing operational and energy efficiency and reducing total cost of ownership.

These competence areas include bearings and units, seals, lubrication systems, mechatronics, and a wide range of services, from 3-D computer modelling to cloud-based condition monitoring and asset management services.

SKF’s global footprint provides SKF customers with uniform quality standards and worldwide product availability. Our local presence provides direct access to the experience, knowledge and ingenuity of SKF people.

Important information on product usage
All products from SKF may be used only for their intended purpose as described in this brochure and in any instructions. If operating instructions are supplied with the products, they must be read and followed.

Not all lubricants are suitable for use in centralized lubrication systems. SKF does offer an inspection service to test customer supplied lubricant to determine if it can be used in a centralized system. SKF lubrication systems or their components are not approved for use with gases, liquefied gases, pressurized gases in solution and fluids with a vapor pressure exceeding normal atmospheric pressure (1 013 mbar) by more than 0,5 bar at their maximum permissible temperature.

Hazardous materials of any kind, especially the materials classified as hazardous by European Community Directive EC 67/548/EEC, Article 2, Par. 2, may only be used to fill SKF centralized lubrication systems and components and delivered and/or distributed with the same after consulting with and receiving written approval from SKF.
