

QR codes on SKF packaging

QR codes on product packaging means quick access to technical support

All SKF vehicle aftermarket packaging features a QR code providing instant access to a mobile web page containing all the necessary and up-to-date information for the respective SKF repair kit. Each code can be scanned using any smartphone or tablet.

This initiative has been put in place to help repair technicians find relevant, technical information wherever they are and support them in carrying out repairs correctly.

The information is not only accessible quickly and easily but the technology allows us to update it as often as needed.

Product specific QR code on SKF boxes

By scanning the QR codes, customers will get instant access to the following information:

- Fitting instructions
- Product images
- Engine diagrams
- Technical installation videos on YouTube
- Technical bulletins
- Product description
- Kit content
- Complete list of applications for that kit

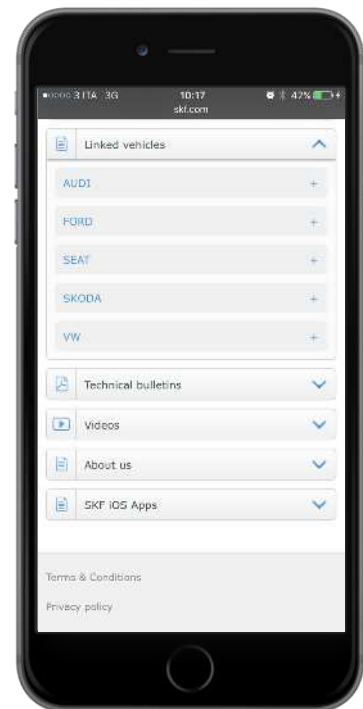

Further product information can be found in the SKF online catalogue available at vsm.skf.com or as a download via the SKF Automotive parts search app.
