

# SKF Super-precision manager app

# Select the right bearing with super precision

With this app it only takes a few seconds to find out if the super-precision bearing in your hand is the right match. All you have to do is scan the packaging or the bearing itself to get direct access to product data and mounting procedure. If you need a set of bearings, you find a simple and precise way of grouping universally matchable bearings.

## Track the bearing

- **Product facts**

The app gives you easy access to a wide range of data such as the country and date of manufacturing, and bearing dimensional data.

- **Mounting instructions**

With the app you can scan the bearing or packaging and easily find a convenient electronic report with mounting procedures. This not only saves time but also guarantees proper installation.

- **Measurement report**

The app is capable of automatically creating measurement reports providing bearing dimensional data. You can open, print and share the product data in different formats. The risk of error decreases as you do not need to manually record data.

## Bearing matching function

Single universal bearings can be matched together to obtain sets. To get the best performance from the set, it is fundamental to consider some important geometrical bearing parameters. The app will support you in carrying out the proper selection.

## Accelerate growth with SKF data

Access to accurate and up to date data is crucial. Using an application programming interface (API) allows you to build your own technical solutions around tools and machinery while accessing vast quantities of SKF data. An API lets you integrate your solutions with SKF to optimize your business and ultimately increase the lifetime of assets and lower your costs. For more information, see <https://www.skf.com/group/support/apis>

3

Ready to use

**Available in following languages:**

English  
French  
German  
Italian  
Spanish

Portuguese  
Swedish  
Czech  
Polish  
Russian

Simplified Chinese  
Traditional Chinese  
Japanese  
Korean  
Vietnamese

# Download SKF Super-precision manager app

It does not only ensure that you have the right bearing, you also get access to mounting instructions and product data. The app makes it easier to select proper universally matchable bearings to create sets. This choice is critical when for example mounting bearings in spindle applications.

Even maintenance and documentation become a lot easier. You can track the history of each bearing and create documentation that you can either print or forward electronically. This saves time and reduces the risk of error since you don't have to manually re-enter data from handwritten reports.
