SKF Electronic Parking Brake
Product description

The SKF Electronic Parking Brake is a cable puller actuator: a compact and smart solution developed to provide a robust parking brake function on the vehicle. Specifically designed for harsh environments and operating over the vehicle CAN bus. This actuator offers an add-on solution which integrates Electronic Control Unit (ECU) and embedded software. It is connected to the vehicle braking system by a flexible cable (Bowden cable).

Product dimensions and interfaces

![Product dimensions diagram]

| Connector type: Delphi SICMA series 24 way male (p/n HCCPHE24BKA00F). Sealed when connected to the relevant Delphi SICMA series 24way female. |

Performances

### Electromagnetic compatibility

- Overvoltage and reverse polarity protection on power bus
- Short circuit protection (to ground, to voltage battery) of all lines
- Immunity to power transient pulses as per ISO7637 (pulse 1, 2, 3a, 3b, 4, 5)
- Immunity to RF E-field up to 150 V/m (ISO14982) and bulk current injection up to 200 mA (ISO11452-4).
- Immunity to ESD up to ±15 kV in air, ±8 kV on housing and connector’s pin (as per EN61000)
- Conducted emissions and radiated emission meet CISPR25 level 3

### SKF Electronic Parking Brake

SKF Electronic Parking Brake is homologated for vehicle installation according to:

- Regulation ECE / ONU N° 10 Amendments 03

![SKF Electronic Parking Brake with customised Bowden cable](image-url)
Options

- Management of a secondary power supply that can be used in case of primary power supply failure. This includes:
  - Secondary power supply diagnostic
  - Possibility to charge an external battery (maximum charging current: 200 mA)
- CAN Bus embedded terminating resistor (120 Ohm).
- Bowden cable customisation.
- Software customisation in order to adapt SKF EPB logics to customer required functions and vehicle network CAN messages. For example:
  - modulated EPB activation through a proportional command
  - Functional integration with vehicle stability control systems.
- Electronic Control Unit I/O available:
  - High side / low side digital outputs (i.e.: to drive an external trailer brake activation relay or LEDs)
  - Analog inputs
  - Digital / frequency inputs
  - +5 V power supply (i.e.: to supply an external sensor)

The Power of Knowledge Engineering

Combining products, people, and application-specific knowledge, SKF delivers innovative solutions to equipment manufacturers and production facilities in every major industry worldwide. Having expertise in multiple competence areas supports SKF Life Cycle Management, a proven approach to improving equipment reliability, optimizing operational and energy efficiency and reducing total cost of ownership.

These competence areas include bearings and units, seals, lubrication systems, mechatronics, and a wide range of services, from 3-D computer modelling to cloud-based condition monitoring and asset management services. SKF’s global footprint provides SKF customers with uniform quality standards and worldwide product availability. Our local presence provides direct access to the experience, knowledge and ingenuity of SKF people.
